Patient autonomy and relational autonomy: A constructivist methodological analysis. The objectives were to clarify and define the constructs of patient autonomy and relational autonomy in order to make the theoretical concepts useful in clinical practice and research. This was a constructivist methodological analysis. A theoretical review of 17 articles on the concepts of autonomy in clinical practice and five articles on relational autonomy. The conceptual analyses yielded three concepts: patient autonomy, relational autonomy, and agency. The concepts of patient autonomy and relational autonomy share a common theoretical basis of B. Kohlenberg's relational self-image theory. The concept of relational autonomy contributes to a deeper understanding of the concept of patient autonomy, as well as a broader view of its consequences in clinical practice and research.// // LYChatMusicCell.h // LYChat // // Created by [?] on 2019/5/2. // Copyright © 2019 LY.
